Abstract (en)
[origin: WO0013901A2] The invention relates to a turning bar arrangement for paper webs of a web-fed printing machine. According to the invention, a compact and space-saving construction is attained in that two turning bars which are connected to one another while forming an acute angle are mounted such that they can be horizontally displaced in a first plane of a turning level. A second such arrangement of turning bars is provided in a second plane of the turning level.
[origin: WO0013901A2] The invention relates to a turning bar arrangement for paper webs (76, 77) of a web-fed printing machine. According to the invention, a compact and space-saving construction is attained in that two turning bars (01; 02; 67; 68) which are connected to one another while forming an acute angle (X) are mounted such that they can be horizontally displaced in a first plane (A) of a turning level. A second such arrangement of turning bars is provided in a second plane (B) of the turning level.
