Abstract (en)

[origin: WO0014315A1] The invention relates to a device for transporting harness elements, notably drop wires (LA) for weaving machines, which are arranged on substantially horizontal supporting members (22). Said device is characterized by a plate (21) which is substantially parallel to the supporting members (22) and positioned beneath same. The drop wires (LA) rest on both the supporting members and the plate by forming an angle alpha . The supporting members (22) and plate (21) can be displaced in relation to each other.
