Abstract (en)

[origin: WO0014971A2] A bell sound selecting method for a cellular phone using an audio response system is disclosed. In this method, a user can easily recognize his or her own bell sound which is different from other's, by receiving his or her own distinctive bell sound from the audio response system and outputting the received bell sound when a call is received into the cellular phone. Therefore, the user of the cellular phone can correctly recognize his or her own bell sound even at a very crowded place.
