Abstract (en)

[origin: EP1113117A2] To erect a shingle roof, insulation boards (1) are used to support the shingles. The upper (3) and lower (4) skins of the boards (1) have a diffusion resistance of about 8 mu , and the insulation core (5) has a resistance of 20-70 mu . The insulation core (5) forms two projections and two recessed zones, in relation to the outer skins (3,4), with chamfers at the upper and lower edges of the core projections. The insulation boards (1) are locked together by tongues and grooves. Locking hooks (15) for the shingles are screwed to the upper skin (3) of the boards (1). The upper and lower skins (3,4) are of water-resistant medium density fiberboards (MDF).
