Abstract (en)
The domestic apparatus (6) is for the illumination of a work place and has at least one decorative and/or at least one functional component (10). From the device leads a light beam path (12), via which from a light source (14) in the apparatus additionally to the work place simultaneously also the at least one decorative and/or functional component (10) can be illuminated. The light beam path extends from the work place illumination device (5) to the rear side of the decorative and/or functional component. The decorative and/or functional unit at least in part areas or in abutting surrounding area is permeable for the light of the light beam path. In the light beam path is a light conductor (26) which conducts the light from the work place illuminating device to the decorative and/or functional component.
