Abstract (en)

[origin: EP1113525A2] The connector row includes at least one current rail arrangement arranged in the insulating casing, and at least one short-circuit bridge arrangement for a cross distribution of a voltage to at least one further, added row connector, especially for realizing a short-circuit bridge between the current rail arrangements of strung together converter connectors. At least one of the bridge arrangements is formed as switchable plug arrangement (19) which can be latched in at least two different positions at the insulating casing, within an insertion channel (21) extending into the insulating casing (1) up to the current rail arrangement (11).
