Abstract (en)  
[origin: WO0015066A1] The invention concerns a gliding sport shoe consisting of a shell base (2) extended vertically by two lateral wings (3, 4) co-operating with a rear cover (5) and a front cover (6). The shoe comprises adjusting means (8, 9, 10, 11) for adjusting the shoe to the user's foot and matching means (14) for opening/closing the upper (7), using the front cover and rear cover as reference relative to the shell base (2) and in particular relative to the wings (3, 4) of said shell base by means for supporting (A, A', B, B') and driving, during a front flexion of the upper, the rear cover which comprises the means for resisting to said flexion.
