Abstract (en)

[origin: WO0049945A1] A dental x-ray bite block (10) for securing an x-ray sensor (40) has a first block section (11) having a primary clamp face (17) and a second block section (12) having a secondary clamp face (23). The first block section (11) is configured with receiving means (41) to receive the second block section (12), such that the primary and said secondary clamp faces (17, 23) are positioned in a spaced, opposing relation when the second block section (12) is received within the first block section (11). There is also an adjustable securing means (50, 51) for affixing the position of the second block section (12) relative to said first block section (11) when received therein.
