Abstract (en)  
[origin: WO0015210A2] The invention relates to methods of treating viral diseases caused by viruses of the family Flaviviridae, or by a virus which targets the mammalian liver as a main repository for viral replication. The methods of this invention involve the use of mycophenolic acid or its derivatives, particularly mycophenolate mofetil alone, or in combination with other anti-viral agents. The methods of this invention are particularly useful in treating hepatitis B virus, hepatitis C virus, and dengue virus viral infections.
