Abstract (en)

[origin: DE19842445A1] The printer includes at least one exchange container (20) for ink, and a support (10, 80) for the exchange container. An insertion mechanism (14, 22) is provided at the support, through which the exchange container is adjustable from a loading position to an operating position. A conductor element (44, 50) is preferably arranged at the support, for the transport of ink from the exchange container to a print head of the ink jet printer, and the conductor element has devices for the automatic connecting of the exchange container at the conductor element.
