Abstract (en)  
[origin: WO0015489A1] The present invention relates to a mooring arrangement, which allows safe and economical mooring, primarily of smaller vessels to ground-anchored or floating structures at sea, such as sea based wind-power stations, lighthouses and constructions for extracting and loading oil. It may also be used for mooring two vessels against each other, for example a pilot boat to a larger vessel. The invention solves the problem by means of a mooring arrangement, comprising a connecting means (4), a manoeuvring member (5) arranged at one end of the connecting means, a locking device (6) arranged at the other end of the connecting means and a control means (8).
