Abstract (en)
[origin: EP0987193A1] The tube of a plastics film, to hold a liquid or paste, has an end wall (13) and two side walls (11,12) which are bonded together by two strip side edge sections (17,18) and an end strip section (19). The tube of a plastics film, to hold a liquid or paste, has an end wall (13) and two side walls (11,12) which are bonded together by two strip side edge sections (17,18) and an end strip section (19). The film material (11-13) is a laminate with at least one inner sealing layer of polyolefin in thickness of 60-200 μ m and an outer layer of polyester which is 10-25 microns thick. The side strip sections (17,18) have a width (b) which is at least 6.5% of the total width (B) of the tube side walls (11,12) and less than 4 mm. The tube structure can include an aluminum barrier layer 7-12 microns thick.
