Abstract (en)
[origin: WO0015541A1] The invention relates to a protection for a fuel valve of a fuel delivery column, which fuel valve, which can be mounted on said protection, is built up of a valve housing provided with a bore and a valve body which is movably accommodated in said bore, wherein the position of said valve body and thus the fuel supply through said valve can be adjusted by means of at least one electromagnetic solenoid to be shielded from the valve, which solenoid extends through said protection into an opening formed in said valve housing and being in communication with said bore. The protection according to the invention is characterized in that it is arranged for several fuel valves and in that the required electromagnetic solenoids can be shielded by means of one cover to be mounted on said protection.
