Abstract (en)
[origin: WO0015542A1] The invention relates to a hose storing device comprising a housing, in which a fuel supply connection is disposed, a flexible hose, one end of which is connected to said fuel supply connection and the other end of which, which extends through a hose passage, is fitted with a fuel nozzle which can be stored in said housing by means of a support attached to said housing, wherein the flexible hose is passed over one or more rollers in said housing, at least one roller of which is accommodated in said housing in such manner as to be movable against a return force in substantially vertical direction. The hose storing device is according to the invention characterized in that in use, when the flexible hose is being pulled from the housing, the movable roller can be moved to a position near the hose passage.
