Abstract (en)

[origin: EP1361332A1] The invention relates to a window decoration / sun protection such as a horizontal slatted blind, a vertical slatted blind, a roller blind, and a pleated blind. When brought into a condition ready for use, the window decoration comprises a first face extending in horizontal direction over at least substantially the full width of the window decoration. When brought into the condition ready for use, the window decoration further comprises a second face extending in horizontal direction of the window decoration. The first face transmits at least substantially no light. The second face subdues the incident light in such a manner that a person present at his workplace in an inner space provided with the window decoration can still look outside through the second face, the first face being located above the second face. <IMAGE>
