Abstract (en)
A liquid container is provided with a flexible holder (1) with a discharge opening (12), and a closing device (3). From the flexible holder (1), when being deformed, liquid in the container can be taken out. The container is closed by a siphon trap (7). The width of the opening in the siphon trap (7) is such that, when the container is held with the discharge opening directed downwardly and depending on the viscosity of the liquid in the container, only by deformation of the flexible holder (1) liquid is dispensed out of the container. <IMAGE>
