Abstract (en)

[origin: WO0016921A1] Bending apparatus in which tubular or rod-shaped material (1) is bent with the aid of a rigidly mounted roller (11) and a freely movable roller (12), which consists of only one roll. The roll may be translated in two mutually orthogonal directions and moreover may be rotated round an axis that is substantially aligned to a principal axis of the material (1) to be processed.
