Abstract (en)

[origin: WO0016990A1] The invention concerns a document comprising: a base (4) provided with perforations (5) adapted to the binder rings or pins and located in the proximity of one of its longitudinal edges (6) and pressed on one of the document surfaces; a ring-shaped part (7) integral with the base (4) by its transverse edges (8, 9). The base (4) and the ring-shaped part (7) enable to enclose the document over all or part of its thickness to maintain it. The invention is useful for storing documents and stationery articles.
