Abstract (en)

[origin: FR2783838A1] The invention concerns a method for obtaining a mixture of starch branching enzymes extracted from unicellular algae characterised in that it consists in modifying a unicellular algae such that it no longer expresses a starch debranching activity; in treating said modified unicellular algae so as to obtain a concentrated acellular extract; and in subjecting said concentrated acellular extract to molecular sieving so as to obtain a mixture of starch branching enzymes extracted from algae.
