Abstract (en)

[origin: WO0018907A3] The invention relates to specific antisense nucleic acids which inhibit or regulate the expression of the adhesion molecule ICAM-1 in mammalian cells, notably human cells, to vectors and host cells containing these antisense nucleic acids and to pharmaceutical compositions which contain said antisense nucleic acids and are designed to control or treat, for example, acute or chronic inflammatory diseases. The invention also relates to diagnostic kits containing the above antisense nucleic acids.
