Abstract (en)
[origin: WO0008287A1] A vehicle (v) carries a rack (R) controlled by a computer (VC) which enables containers in the rack compartment to be released at their programmed destinations, stored in memory in the inner containers and removable via an interface within the rack. On release, a container is loaded into a mother container for transfer from the vehicle to a docking station. Both the mother container and the rack are provided with dye injections which inject dye through wall openings of the inner container in the event of attempted theft.
