Abstract (en)
[origin: WO0102938A1] The object of this invention is to provide a self-sustaining computer designed to directly stand on a flat bottom, such as a floor. The self-sustaining computer consists of a computer body having a flat upper surface and a stepped lower surface, with a thin front portion and a thick rear portion being formed by the stepped lower surface. A plurality of support legs are vertically mounted to the stepped lower surface of the computer body, and support the computer body on the desired flat bottom. A keyboard panel unit, used for supporting a keyboard thereon, is mounted to the computer body. The self-sustaining computer is not necessarily laid on the top surface of a separate desk or a conventional computer table, but is self-sustained on a desired flat bottom, such as a floor, thus being very convenient for a user.
