Abstract (en)

[origin: WO0014661A1] According to the invention, graph structure data is selected from a plurality of several different graph structure data. Each graph structure data contains the elements that may be selected for its representation in order to graphically describe the structure of the technical system. The elements are selected in such a way that the technical system can be described using the selected elements. The elements are represented by an editor program in which the selected graph structure data has being integrated.
