Abstract (en)

[origin: WO0017833A1] The invention relates to a method and a system for paying for goods or services, comprising a mobile radiotelephone device (3) and a telecommunications base station (1), which communicates with said mobile radiotelephone device (3) by means of electromagnetic waves. The telecommunications base station (1) transmits the data that are necessary for payment to the mobile radiotelephone device (3), which then requests confirmation of the payment from the user. After confirmation, the mobile radiotelephone device (3) carries out a payment operation by emitting payment statement data. Either the mobile radiotelephone device (3) or a telecommunications device (6) of a financial institution transmits acknowledgement data for the payment operation to the telecommunications base station (1).
