Abstract (en)

[origin: WO0017962A1] Terminal contact faces (10) on the component side are arranged on an outer surface (15), in at least two rows (16, 18). Corresponding contacts (22) of a terminal part (40) are correspondingly arranged in two contact rows (26, 27). The contacts (22) of each contact row can be jointly moved away from the outer surface (15) by a control element (30). During the assembly process, the rows of contacts (26, 27) of the terminal part (40) which are located behind each other in the direction of assembly (A) are moved away from the outer surface (15) by the component (1), one after the other and starting with the front contact row (26). On reaching their final assembly position, the rows of contacts come into electrical contact with the terminal contact faces (10).
