Abstract (en)

[origin: EP1116661A1] Cigarette packs include thermal internal sealing to protect the product against deterioration from the effect of heat and pressure and during the manufacturing process, a cut for the support-insert (14) is made as a U-shaped configuration in the region of a frontal face and in the region of the long side faces by U-shaped folding partly around the cigarette group(11). A cutting of thermally sealable foil or film is folded around the unit consisting of the cigarette group and the support insert (14) for forming the encapsulation.
