Abstract (en)

A liquid mixture consisting essentially of (i) one or more fatty esters and (ii) one or more non-ionic surface-active agents is used in the cleaning of oiled birds and aquatic animals. Oil is removed from birds and aquatic animals essentially by: (i) externally applying an effective amount of the composition to the oiled surfaces of the birds or animals to form a mixture of oil with said composition; (ii) washing said mixture with a liquid selected from the group consisting of water and mixtures of water with one or more surface-active agents.
