Abstract (en)
[origin: EP1116847A2] The window or door has a frame (4) with a sash (1) which is pivotally attached to it about a rotational axis. An air region is located between the two as is a drive rod stop for locking the sash with respect to the frame. Members are provided for limiting the amount of air in the air chamber, whereby the members limit a relative movement between the frame and the sash. The members consists of a skid which is located in the direction of possible movement at a small distance to a lock unit located on the frame.
