Abstract (en)
[origin: EP1116944A2] The device has a holder (1) mounted on a rack (9) through links (10,11,14). The balance position of balance weight for he wheel is determined. The vehicle wheel (2) can be moved from a first position into a second position. The holder is turned in two directions in such a way that when moved from the first position into the second position the wheel is partly turned to the operator with its inside and is in an inclined position away from the operator.
