Abstract (en)

[origin: DE19845456A1] The invention relates to novel syndet soap bars which contain, as surfactant components, alkyl oligoglycosides and/or alkenyl oligoglycosides and olefin sulfonates, and which contain starch as a builder. The products are characterized by an especially rich and creamy lather and by an optimized skin sensation. In addition, the inventive syndet soap bars are stable in storage when exposed to air, are slightly hygroscopic, can be easily shaped, and exhibit no crack formation when drying.
