Abstract (en)
[origin: WO0004236A1] The invention relates to a platform comprising at least one selectively sized and shaped standing part having at least one support means whereby said support means provides a variable height adjustment to said standing part and further whereby said standing part is at least partially slideably engaged to provide a standing surface which is adapted to be at least partially continuous. The invention has use in providing temporary, permanent, or at least semipermanent platforms for use particularly but not exclusively in the repair of existing platforms.
