Abstract (en)
[origin: DE19936685A1] The invention relates to a high-pressure fuel accumulator of a common rail fuel injection system of an internal combustion engine, with multiple connections (4, 5), especially fuel outlet connections for sensors and valves, etc. In order to provide a high-pressure fuel accumulator which can resist higher pressures than the existing high-pressure fuel accumulators, the invention comprises one accumulator body (1) and at least one distributor body (2, 3) which is constantly connected to the accumulator body (1).
