Abstract (en)

A ratcheting tool includes a handle (11) and a head (12) with a compartment (13). A drive member (20) includes a first end (22), a second end, and a gear wheel (21) formed between the first end and the second end. The gear wheel is rotatably mounted in the compartment and includes a toothed outer periphery. A pawl (30) is mounted in the compartment and includes a toothed side facing the gear wheel teeth (211). A reversing plate (50) is mounted to the first end (22) of the drive member and pivotable about the rotational axis of the gear wheel (21) between a first position and a second position. The reversing plate (50) is operably connected to the pawl (30) for moving the pawl between a first ratcheting position and a second ratcheting position. <IMAGE>
