Abstract (en)
[origin: EP1118567A1] The device has lateral frame elements, a folding pocket after folding rollers on the frame side, two folding pocket carrying bars and devices for removably fixing the folding pocket on the bars. The folding pocket is magnetically interactive at least in the area of contact with the carrying bars, which have electric magnets with an associated voltage source and switch. A weight compensator acts between the folding pocket and a frame element. The device has lateral frame elements (11), a folding pocket (12) after at least three folding rollers (23) mounted on the frame side, two folding pocket carrying bars (13) and fixing devices for removably fixing the folding pocket on the bars. The folding pocket consists of a magnetically interactive material at least in the area of contact with the carrying bars, which have electric magnets with an associated voltage source and switch. A weight compensator (17) acts between the folding pocket and a frame element.
