Abstract (en)
[origin: WO0020181A1] The invention relates to a dispersing station for evenly distributing a dispersible material (7) on a continuously moving support (6). The dispersing station has a device for wind screening (2) and one or more rotationally driven spoked rolls (4, 10, 11, 12, 13, 14, 15), which are provided vertically below the supply of the material (7). At least one roll (4, 10, 11, 12) is located horizontally laterally in the air supply area (3) and has a number of thin spokes, rods, cords or pipes.
