Abstract (en)

[origin: WO0020319A1] A lift assembly comprising a rail system including a supporting section (6) and a lift (7), for example a chair lift for a disabled person, comprising a rotatable guide unit (8) which is movable along said supporting section (6), wherein the lift (7) is capable of upward and downward movement at various angles of inclination, said lift (7) comprising a carrier and means for maintaining the carrier substantially in a predetermined position during said movement, wherein the means for maintaining the carrier substantially in a horizontal position during its movement comprise a guide surface (21) present in the rail system, along which detection means (22, 23) mounted on the lift (7) can move.
