Abstract (en)

[origin: WO0022406A2] The invention relates to a method for analyzing reactive strips. The reactive strips are developed by placing them in a receiving unit, especially a tank, where they are exposed to liquid reagents. According to the invention, the surface of the reactive strips is detected using an optical sensor, and afterwards the detected data is transmitted to an analyzing unit. A tank comprising an optical sensor and an analyzing unit is provided as a device for carrying out the inventive method.
