Abstract (en)

[origin: US2001010131A1] A load-bearing apparatus including a raised front portion, the so-called shovel, that maintains the direction of the apparatus while allowing gliding. The lower surface of the shovel includes a protuberance that is oriented substantially along a longitudinal axis. The protuberance is connected to one of the edges of the shovel by a gliding surface that has substantially continuous slope.

Abstract (fr)

Engin de portance comprenant une partie avant relevée dite spatule (1) qui assure un maintien directionnel de l'engin tout en privilégiant la glisse. La face inférieure (2) de la spatule (1) comprend une proéminence (4) orientée sensiblement selon l'axe longitudinal (20). La proéminence (4) est reliée à l'un des bords (30, 31) de la spatule (1) par une surface de glisse (6, 6b) qui présente une pente sensiblement continue. <IMAGE>
