Abstract (en)

The invention refers to a container device (3), with a first space (4), which is arranged to house a first fluid, and a second space (5), which is defined by a wall member (22) and is separated from the first space. The wall member permits storing of a second fluid at a pressure higher than the atmospheric pressure in the second space. The container device (3) is designed as an integrated unit and includes separate, openable access passages (31, 32) to the first space and the second space. The invention also refers to a plant for the distribution of a mixture of fluids and with a distribution device (26) and at least such a container device (3). <IMAGE>
