Abstract (en)

[origin: EP1120536A2] The motor unit has a first motor for opening and closing the blind and for moving its lamella and/or a second motor for pivoting the lamella. The motor(s) is mounted in a housing with an end connecting element for connecting the housing to a bearer rail. The connecting element is in two parts consisting of a bearing plate (38) for the housing and one (39) for the bearer rail.
