Abstract (en)  
[origin: EP1120599A2] A lighting apparatus (10, 40) for the creation of luminous effects comprises a containment body that houses a light source (11, 22), where the light source (11, 22) is contained inside a shell comprising a plurality of anti-reflection black screens (15, 25) provided with openings for the diffusion of light. The lighting apparatus (10, 40) is moreover provided with a plurality of columns (17, 18, 27, 28) arranged around the light source (11, 22), each of which is equipped with a pair of reflecting plates (19, 20, 29, 30) so as to enable sharp and precise reflection.
