Abstract (en)  
[origin: EP1120602A2] A device (10) for supporting shielding elements (19) for lighting apparatuses (22) comprises a base (11) and a pair of elastic elements (12, 13) set opposite to one another, where the base (11) can be inserted so that it rests on the lamp-holder rim (14) and where the elastic elements (12, 13) set opposite to one another consist of a pair of metal wires. Each of the wires is shaped in such a way as to enable, via co-operation with the wire set opposite to it, clamping and support of a shielding element (19) set in front of the light source (20). <IMAGE>
