Abstract (en)

[origin: WO0021795A1] The invention relates to a method for operating a multifunctional display and control device (1) in an automobile, wherein menu and function related parameters are displayed in a display field (2), wherein control elements (3) for menu and/or function selection are mounted next to the display field (2). The invention also relates to a multifunctional display and control device (1) for an automobile having a display field (2) for displaying information of at least one menu and/or function assignment to be selected and/or already selected and control elements (3) for menu and function selection. According to the invention, the display field (2) consists of several parts, wherein one part of the display represents an information panel (4) that reproduces information pertaining to selected menus or functions. Function and status indications are clearly generated on the remaining parts (2a, 2b) of the display field in such a way that they are assigned to the corresponding control element (3).
