Abstract (en)

[origin: DE19847333A1] Knitted articles, have a strap (12) or loop of thermoplastic, or chemically or physically reactive material, knitted integrally with the main fabric. A section (14) of the strap is treated, to form an attachment element. Knitted articles, especially seat covers (10), have a strap (12) or loop of thermoplastic, or chemically or physically reactive material, knitted integrally with the main fabric. A section (14) of the strap is then treated, e.g., in a hot press, to form an attachment element. The attachment can incorporate metallic or plastic reinforcement (16), e.g., eyelets. An Independent claim is also included for a knitted article (10) with a knitted-in strap (12) and attachment device (14,16) in which the stitch structure of the strap has been at least partially fused by heating.
