Abstract (en)
[origin: WO0022252A1] A structural coupling comprised of two structural components (1, 3), one of which has side edge slotted coupling formations (9) and adjacently positioned locking flanges (10). The coupling formations (9) engage elongate upright coupling flanges (19) on the other structure component (3) and the two structural components are then held together by a locking mechanism (22) which engages the locking flanges (10) of the first structural component (1) to form the coupling. The structural coupling may be used to form a building or similar structure.
