Abstract (en)
[origin: WO0020710A1] A door latch (10) including a latching means, a release lever (20) operable between a first closed position and a second released position, a pawl lifter (16) operable between a first closed position and a second released position, and a lock link (32) operable between a first locked and second unlocked position characterized in that the movement of the lock link (32) from the first locked position to the second unlocked position when the released lever (20) is in its second position and the pawl lifter (16) is in its first position causes unlatching of the latch means.
