Abstract (en)

[origin: DE19847393C1] The invention relates to a disc-shaped recording support (1), especially an optical disc, with which the access time is shortened and the readout speed is increased. The disc-shaped recording support (1) comprises an axis of rotation (5) and a program area (10) for storing useful data, whereby the program area (10) is arranged on the recording support (1) in an annular and concentric manner in relation to the axis of rotation (5). The program area (10) comprises a first part (15) and a second part (20). The first part (15) is arranged closer to the axis of rotation (5) than the second part (20). The useful data is stored only in the second part (20).
