Abstract (en)
A gumming unit (10) is equipped with at least one gumming device (9) having a nozzle (13) and a relative applicator (15) delivering an adhesive, also an occluding and cleaning device (12) by which the orifice of the applicator (15) is closed and wiped during pauses in the gumming operations; the gumming device (9) is power driven so as to render the applicator (15) capable of movement back and forth along a first path (P1) between an operating position (A) and an at-rest position (B), whilst the occluding and cleaning device (12) is capable of movement in one direction (V) only, along a second path (P2) merging with the first path (P1) in the neighbourhood of the at-rest position (B). The occluding and cleaning device (12) is passive, its movement induced by the applicator (15) when assuming the at-rest position (B). <IMAGE>
