Abstract (en)
[origin: US2001010133A1] A device for suspending posters comprises a poster web that can be driven back and forth between two rolls with longitudinal tensioning in the direction of transport. The rolls are arranged one on top of the other. Each of the lateral longitudinal edges of the web extend in the transport direction. To avoid annoying fluttering of the poster web in wind and weather, a holding means is associated as a lateral guide for the web between the rolls.
