Abstract (en)  
[origin: EP1122803A1] The present invention relates to graphite powder and to a battery using it as a negative electrode material, the powder having a specific surface area of not more than 3 m<sup>2</sup>/g, an aspect ratio of not more than 6, and a tapping bulk density of not less than 0.8 g/cm<sup>3</sup>; or a tapping bulk density of not less than 0.8 g/cm<sup>3</sup> and an oxidation initiation temperature of not less than 600 DEG C; or a specific surface area of not more than 3 m<sup>2</sup>/g and a tapping bulk density of not less than 0.8 g/cm<sup>3</sup>, a specific electrical resistance of the powder not more than 0.06 OMEGA cm in the specified condition. The battery obtained thus has a large discharge capacity, good cycle property and high charge and discharge efficiency. <IMAGE>
